WE CLAIM:

5

- 1. A sterile dialysis concentrate composition for use in a dialysis solution comprising sodium chloride (NaCl) 90.72 \pm 9.0 g/l, magnesium chloride (MgCl2) 2.05 \pm 0.2 g/l, and sodium bicarbonate (NaHCO3) 28.35 \pm 2.8 g/l.
- 2. A kit for preparing a dialysis solution comprising the sterile dialysis concentrate composition of claim 1 and optionally instructions for its use.
- The kit of claim 2 further comprising sterile water sufficient to dilute the concentrate to a solution comprising Na 140±14 mmol/l, Mg 0.75±0.07 mmol/l, Cl 116.5 ± 11 mmol/l, and HCO3 25.0 ± 2.5 mmol/l.
 - 4. A method of preparing a sterile dialysis solution comprising diluting a sterile, dialysis concentrate composition of claim 1 in a sufficient amount of sterile water to prepare a dialysis solution comprising Na 140±14 mmol/l, Mg 0.75±0.07 mmol/l, Cl 116.5 ± 11 mmol/l, and HCO3 25.0 ± 2.5 mmol/l.
- 5. A method for providing continuous renal replacement therapy to a patient comprising administering a sterile dialysis solution prepared according to the method of claim 4 in conjunction with a regional citrate anti-coagulant solution to a patient in need thereof.
- 6. A method of preparing a sterile infusate comprising diluting a sterile, dialysis concentrate composition of claim 1 in a sufficient amount of sterile water to prepare an infusate comprising Na 140±14 mmol/l, Mg 0.75±0.07 mmol/l, Cl 116.5 ± 11 mmol/l, and HCO3 25.0 ± 2.5 mmol/l.
- 7. A method for treating acute renal failure in a critically ill patient without introducing calcium into the blood removed from the patient during dialysis comprising administering a sterile dialysis solution prepared according to the

method of claim 6 in conjunction with a regional citrate anti-coagulant solution to a patient in need thereof.

- 8. A method for providing hemofiltration to a patient comprising administering a sterile infusate prepared according to the method of claim 6 in conjunction with a regional citrate anti-coagulant solution to a patient in need thereof.
- 9. A sterile dialysis solution comprising the concentrate as claimed in claim 1 and a physiologically acceptable diluent.
 - 10. A sterile dialysis solution according to claim 9 comprising Na 140 \pm 14 mmol/l, Mg 0.75 \pm 0.07 mmol/l, Cl 116.5 \pm 11 mmol/l, and HCO3 25.0 \pm 2.5 mmol/l.

15

- 11. A use of a sterile calcium-free bicarbonate concentrate according to claim 1 for preparing an infusate for hemofiltration.
- 12. A use of a sterile, calcium free bicarbonate concentrate according to claim 1 for preparing a dialysis solution for use in metabolic acidosis.
